**SATCO PRODUCTS, INC.
OFFERS ENERGY EFFICIENCY WITH
NEW SATCO HYGRADE PRODUCTS**

Brentwood, NY - June 10, 2009 - SATCO Products, Inc., a 2009 ENERGY STAR Partner of the Year in the lighting manufacturing category, announces their new line of energy-efficient products featuring their new SATCO HYGRADE brand. The HYGRADE brand was acquired by SATCO in late 2008.

The SATCO HYGRADE line boasts an array of new commercial lighting products representing a high standard of performance and energy efficiency. These long lasting quality products not only reduce energy and maintenance costs, they also lessen our impact on the environment.

Made with low levels of mercury, many of these products are designed to pass the Federal Toxicity Characteristic Leaching Procedure (TCLP) - an important designation in many green building projects. These lamps are also manufactured to meet the Reduction of Hazardous Substances (RoHS) meaning that they can be classified as "lead free." With climate change and environmental issues at the forefront of the commercial industry, SATCO is providing lighting solutions to meet the green building and energy reduction needs that building owners and operators are looking for in both new construction and retrofit projects.

Highlights of the new line include:

- T5 linear lamps, with their slim 5/8-inch diameter, allow product designers a fresh concept for approaching energy-efficient lighting. They are available in the standard version, in wattages of 14, 21, 28 and 35.

- The T5 High Output series is available in 24, 39 and 54. The Standard and High Output T5 lamps maintain more than 95% of the light output at 40% of their rated life. An improved phosphor coating reduces mercury absorption, ensuring a long, high performance life.
- T5 Circline lamps provide up to 50% more light output than standard T9 Circlines. These tri-phosphor lamps also deliver superior color rendition and significantly higher lumen maintenance and are available in 22, 40 and 55 watts.
- The T8 lamps offer 18% more energy savings than standard T12s and 12% more than standard T8s. Also available is the T8 High Lumen energy-saving version of the T8 line of fluorescent lamps, offering 92 lumens-per-watt, making it one of the most energy-efficient fluorescent lamps on the market. These lamps are commonly used to replace T12s in new construction and energy retrofits.
- The SATCO HYGRADE CFL product line, consisting of twin tubes, quads and triples, have excellent color rendition and are suitable for use in many applications. They are all designed to TCLP and RoHS standards. The 4-pin lamps are manufactured with End of Life (EOL) shut down protection.
- The Supreme Extra Life incandescent lamps offer 5,000-hour and 20,000-hour A19 lamps, Rough Service A19 lamps and 5,000 hour R20, BR30 and BR40 reflectors. These durable options for commercial applications allow for long life with lower replacement costs.
- The SATCO HYGRADE HID product line encompasses not only the high demand lamps but features products that offer superior performance and up to 20% energy savings while achieving high lumen output, making them the preferred product for sustainability. Available options include Protected and Pulse Start Metal Halide, High Pressure Sodium and Mercury Vapor.

Bill Gildin, President of SATCO Products, Inc., said, "SATCO HYGRADE is the brand of choice for any commercial application, due to its high standards of performance, reliability, sustainability and value. We

are pleased to offer the commercial lighting industry this extensive release of high demand product in one offering."

The SATCO HYGRADE catalog is available on request from local SATCO Products Inc. distributors.

About SATCO Products, Inc.

SATCO, established in 1966, manufactures and distributes a wide variety of lighting products to an international lighting and electrical market. SATCO was named the 2009 ENERGY STAR Partner of the Year in the lighting manufacturing category, as well as 2008's "The Best of the Test" by the Good Housekeeping Research Institute. Under the SATCO brand (www.satco.com) the company's product categories include incandescent, halogen, fluorescent, HID and energy-efficient lamps. SATCO also offers lighting and electrical components for the retail, commercial and manufacturing trade and consumer products such as night lights, desk lamps, and surge protectors. In June 2005, SATCO launched a new line of decorative and functional lighting fixtures sold under the NUVO brand (www.nuvolighting.com). The NUVO product line is strongly focused on energy efficiency with nearly 600 product styles which are ENERGY STAR qualified. An additional 2100 products service the decorative and light commercial markets.
